INKLOOM AI HACKATHON • ROUND 1 FINAL DELIVERABLE

BrandGuard AI

Pre-Publication Multi-Modal Brand Governance, Stage-Gate Compliance & Automated Remediation Platform

DOCUMENT TYPE: Engineering & Architecture Project Report
VERSION: 2.0 Production Release Candidate
DATE: October 2026
SECURITY CLASSIFICATION: Open Hackathon Submission

SUBMITTED BY: TEAM SYNAPSE
• **Aman Sharma** — Team Leader & Backend / System Architect
• **Janhavi Kanojia** — Frontend & UI/UX Experience Lead
STACK: Python 3.11 • Flask • SQLite • OpenCV • ReportLab

EXECUTIVE ABSTRACT & SYSTEM OBJECTIVE

BrandGuard AI introduces a deterministic pre-publication governance co-pilot that evaluates marketing drafts across linguistic tone polarities, FTC truth bank registries, and visual accessibility before deployment. Featuring 1-click tone-preserving rewrites, three strictly isolated role portals (Client Workspace, Reviewer Desk, Executive Admin), and cryptographic PDF audit certification, BrandGuard AI accelerates campaign velocity while delivering total compliance defense.

4 Deterministic Engines	**3 Isolated Portals**	**22 Automated Tests**	**SHA-256 Tamper-Proof**
Tone, Truth, Contrast, Clarity	Client, Reviewer, Admin RBAC	100% Pass Verification Rate	Cryptographic PDF Certificates

GITHUB: **https://github.com/CodingWithAman1/BrandGovernanceAI.git** • RENDER CLOUD: **prj-dbgu43t9el5s73dhpa60** • HOST: **http://localhost:5000**

CHAPTER 1

1. Problem Statement & Regulatory Imperatives

Modern enterprise marketing teams face conflicting imperatives: producing high volumes of multi-channel content at rapid velocity while confronting escalating regulatory oversight. This operational friction causes systemic compliance failures:

1.1 The Operational Bottleneck: Creative teams wait an average of **3.2 business days** for manual legal review of ad copy, social posts, and display banners. Under tight campaign deadlines, up to 42% of unvetted creative collateral is pushed directly to production channels without compliance clearance.

1.2 The Synthetic Copy Deluge: While 85% of enterprises possess formal brand style guides, fewer than 30% enforce them systematically. The proliferation of generic generative AI tools has worsened this challenge, flooding marketing channels with clichéd synthetic filler (*'delve into'*, *'a testament to'*), unsubstantiated competitive attacks (*'crush the competition'*), and aggressive superlative claims.

85%	30%	3.2 Days	+33%
Have Brand Rules	**Consistent Adherence**	**Review Latency**	**Revenue Uplift**
Possess formal guidelines.	Systematic channel compliance.	Manual legal turnaround delay.	With uniform brand execution.

1.3 The Regulatory Landscape: Statutory penalties for deceptive advertising and non-accessible design have become severe enforcement priorities globally:

REGULATORY BODY	STATUTORY MANDATE	GOVERNANCE RISK ENFORCED
FTC Section 5	Operation AI Comply & Truth in Advertising	Prohibits unsubstantiated claims, fake testimonials, and unprovable '#1' market leadership superlatives without third-party proof.
SEC Enforcement	'AI-Washing' Statutory Prohibitions	Penalizes false representations of autonomous capabilities, unverified 100% uptime claims, and risk-free commercial representations.
ADA Title III / WCAG	WCAG 2.1 AA Digital Accessibility	Enforces 4.5:1 text-to-background contrast ratios in digital banners, protecting brands from civil accessibility litigation.

STRATEGIC IMPERATIVE: PRE-PUBLICATION GOVERNANCE CO-PILOT

BrandGuard AI replaces post-publication auditing with a deterministic **pre-publication gatekeeper**. By diagnosing non-compliant phrasing, unverified claims, and accessibility violations in real time, BrandGuard AI collapses approval turnaround from 3.2 days to under 30 seconds while guaranteeing complete compliance before content reaches public channels.

CHAPTER 2

2. Three Dedicated Portals & Role-Based Access Control

A foundational architectural pillar of BrandGuard AI is its strict separation into three isolated operational portals. Rather than blending user personas into a shared interface, BrandGuard AI implements strict Role-Based Access Control (RBAC):

CLIENT & CREATOR PORTAL

Route: /client/dashboard

Tailored for marketing copywriters and creative agencies. Features the Pre-Publication Studio, live character counting, 3 instant sample presets, real-time radial score gauges, 1-click tone-preserving remediations, and clean text export (.txt). Creators cannot approve their own drafts.

REVIEWER & LEGAL DESK

Route: /reviewer/dashboard

Restricted to Brand Managers and Legal Counsel. Features the centralized Stage-Gate queue, side-by-side red/green diff inspector, exception justification reviewer, threaded audit comments, and formal 1-click Approve, Request Changes, or Reject actions.

EXECUTIVE ADMIN CONTROL

Route: /admin/dashboard

Strictly locked to Aman Sharma (aman@synapse.ai). Provides global system telemetry, dynamic CRUD Brand Rulebook editor, SQL Truth Bank manager, user role governance (promoting/demoting reviewers and clients), and the Guideline Clarity Index.

SECURITY LAYER	MECHANISM & IMPLEMENTATION	ENFORCEMENT BEHAVIOR
Route Guarding	`Flask-Login @login_required decorator across all internal dashboard and studio endpoints.`	Intercepts unauthenticated requests and issues **HTTP 302 redirect to /login**. Restricts direct URL bypass.
Role Boundary Isolation	`Secondary RBAC verification checks current_user.role against endpoint role requirements.`	Creators attempting to access /reviewer/* or /admin/* receive an authorization flash warning and redirect.
Sole Admin Gate	`Strict hard-coded check: current_user.email == 'aman@synapse.ai' within the admin blueprint.`	Prevents privilege escalation; unauthorized staff attempting to access /admin/dashboard are blocked immediately.
Firebase Auth Sync	`Firebase project brandbuildai-2749e. Web SDK sends OAuth ID tokens to /auth/api/firebase-sync.`	Syncs Google identity securely with SQLite/PostgreSQL user records and maintains Flask session integrity.

2.3 Dynamic Role-Adaptive UI Navigation: The navigation bar dynamically adapts to the authenticated role. Client accounts display links to 'Scanner Studio' and 'My Drafts', Reviewers see 'Review Queue' and 'Audit Diffs', while Administrator accounts expose 'Brand Rulebook CRUD', 'Truth Bank', and 'User Management'.

CHAPTER 3

3. The Four Deterministic Governance Engines

BrandGuard AI rejects non-deterministic LLM prompting for core compliance clearance. Prompting LLMs with *'Is this compliant?'* yields unpredictable hallucinations and fluctuating scores. Instead, BrandGuard AI implements four deterministic, rule-grounded engines:

ENGINE	UNDERLYING ALGORITHM & STANDARDS	IMPACT & REMEDIATION
Engine 1: Tone Calibrator	**5 Voice Polarity Spectrums & Regex Filters** • Scans for 6 clichéd AI filler patterns (*delve into*, *rich tapestry*, *a testament to*, *game-changer*, *unpack*). • Catches aggressive competitor attacks (*crush the competition*) and condescending phrasing (*obviously*). • Subtracts points proportionally (Critical: -15, Warning: -10, Suggestion: -5).	Generates context-aware, 1-click tone-preserving suggested rewrites without homogenizing the author's message.
Engine 2: Truth Bank Checker	**FTC Section 5 Guardrails & SQL Truth Bank** • Cross-checks claims against the ApprovedFact repository containing verified citations and validity dates. • Flags absolute unprovable superlatives (*#1 in the world*, *world's fastest*, *100% risk free*). • Docks -20 points per regulatory claim violation.	Protects against FTC Section 5 and SEC enforcement actions by requiring verifiable third-party evidentiary proof.
Engine 3: Visual Inspector	**OpenCV K-Means & WCAG 2.1 Contrast** • Extracts dominant palette colors using K-Means color quantization in Pillow/OpenCV. • Enforces WCAG 2.1 AA relative luminance contrast formula: Ratio = (L1 + 0.05) / (L2 + 0.05). • Scans text inside graphics via OCR to prevent visual copy bypass.	Ensures marketing banners adhere to corporate design tokens and satisfy statutory 4.5:1 text contrast ratios.
Engine 4: Clarity Engine	**Guideline Friction Index & Heatmap** • Tracks creator dispute rates, overrides, and 1-click acceptance ratios. • Computes rule friction: Friction = Overrides / Flags. • Assigns empirical clarity scores (0–100%) to each corporate guideline.	Transforms governance into an empirical feedback loop, identifying ambiguous rules that need refinement.

DETERMINISTIC COMPLIANCE FORMULATIONS & STANDARDS

- **WCAG 2.1 AA Relative Luminance:** `L = 0.2126*R + 0.7152*G + 0.0722*B` where sRGB values are gamma-linearized. Contrast ratio `Cr = (L_lighter + 0.05) / (L_darker + 0.05)`. Minimum threshold: **4.5:1** for normal text, **3.0:1** for large text.
- **Guideline Clarity Index (GCI):** `GCI = 100 - [(Dispute_Rate * 0.6) + (Exception_Frequency * 0.4)] * 100.`
- **Composite Brand Health Score:** `Score = 100 - sum(Severity_Penalty_i) clipped to [0, 100].`

CHAPTER 4

4. Stage-Gate Workflow & Cryptographic PDF Certification

BrandGuard AI enforces a formal **Human-in-the-Loop (HITL)** release boundary. Automated algorithms diagnose and suggest remediations, but formal clearance requires authorized human reviewer approval:

STAGE	SYSTEM / ACTOR ACTION	DELIVERABLE / STATE TRANSITION
1. Studio Input	Creator drafts copy or uploads creative assets; animated Laser Scanner HUD executes pre-flight scan.	Generates diagnostic flags and calculates real-time Brand Health Score (0–100%).
2. 1-Click Fix	Creator clicks remediation button; text updates with dark-mode emerald glow without page reload.	Live score recalculation; flags resolve instantly or creator enters exception rationale.
3. Stage-Gate Submission	Draft transitions from DRAFT to PENDING_REVIEW; routes to Reviewer Desk.	Reviewers receive centralized queue notification with urgency badges and SLA trackers.
4. Reviewer Inspection	Brand Manager or Legal Counsel inspects side-by-side red/green diffs, comments, and citations.	Reviewer executes 1-click action: **Approve**, **Request Changes**, or **Reject**.
5. Cryptographic Certification	Upon approval, ReportLab compiles an unalterable, tamper-evident PDF Compliance Certificate.	SHA-256 fingerprint generated over final text and permanently stored in database.

ANATOMY OF THE CRYPTOGRAPHIC PDF COMPLIANCE CERTIFICATE

- **SHA-256 Fingerprint:** Cryptographically seals the approved copy text. Modifying a single character after approval invalidates the hash.
- **Audit Trail Metadata:** Embeds Submission ID, Approver ID, Reviewer Name, Department, and UTC Timestamp.
- **Health Breakdown:** Displays final Overall Compliance, Tone Balance, Truth Verification, and Visual Contrast scores.
- **Legal Defense Asset:** Serves as an unalterable certificate for enterprise compliance audits and regulatory due diligence defense.

HUMAN EXCEPTION HANDLING & DISPUTE RESOLUTION

When creative context warrants intentional departures from standard guidelines (e.g., deliberate edgy branding in a targeted campaign), creators submit an **Exception Justification**. This justification is permanently appended to the submission record, requiring formal reviewer sign-off. This mechanism eliminates workflow deadlocks while maintaining an immutable audit log.

CHAPTER 5

5. Obsidian Cyberpunk Design System & Micro-Interactions

To deliver a world-class enterprise user experience, BrandGuard AI implements a bespoke **Obsidian Cyberpunk Design System** with custom interactive cursors and moving background elements:

UI COMPONENT	TECHNICAL IMPLEMENTATION	USER EXPERIENCE BENEFIT
Interactive Dual Cyber Cursor	• Inner luminous pointer dot (#cursor-dot) with instant tracking. • Outer trailing magnetic ring (#cursor-ring) using 60 FPS Linear Interpolation (lerp) physics. • Dynamic role-color adaptation (Cyan for Client, Amber for Reviewer, Crimson for Admin).	Creates fluid, tactile feedback over clickable cards, buttons, and inputs; automatically hides on mobile/touch screens.
Lively Ambient Background Layer	• Four ambient radial orbs (Indigo, Cyan, Violet, Rose) with 3D Lissajous floating keyframe animations. • HTML5 Canvas constellation particle engine generating 40+ drifting luminous nodes that connect via vector lines. • Subtle cyber command grid overlay with radial vignette mask.	Delivers an authentic high-tech AI command deck aesthetic without distracting from content; auto-pauses when browser tab is hidden.
Multi-Engine Laser Scanner HUD	• Full-screen holographic modal overlay triggered on audit submission. • Oscillating neon laser scanline traversing down the document. • Digital progress gauge counting 0% → 100% with real-time phase indicators.	Provides clear visual feedback during multi-modal scanning, demonstrating the 4-phase verification sequence.
Side-by-Side Diff Engine	• Real-time red/green diff preview container. • 1-Click Fix remediation flashes updated text with dark-mode emerald glow. • Dedicated 'Copy Snippet', 'Copy Clean Copy', and 'Export (.txt)' actions.	Empowers copywriters to review exact textual changes instantly and copy certified copy into their marketing tools.

DESIGN SYSTEM TOKENS & ACCESSIBILITY SPECIFICATIONS

- **Surface Colors:** Deep Obsidian (#0B132B), Card Surface (#1E293B), Command Border (#334155).
- **Role Accents:** Client/Cyan (#0EA5E9), Reviewer/Amber (#F59E0B), Admin/Crimson (#EF4444), Success/Emerald (#10B981).
- **Typography:** Inter UI & JetBrains Mono for cryptographic hashes, code snippets, and timestamps.
- **Accessibility Compliance:** Satisfies WCAG 2.1 AA with minimum 4.5:1 text-to-background contrast across all dark surfaces.

CHAPTER 6

6. Relational Data Model, REST APIs & Verification

6.1 Relational Database Schema: BrandGuard AI operates on a relational schema in SQLite / PostgreSQL via SQLAlchemy ORM:

MODEL	COLUMNS / ATTRIBUTES	PURPOSE & INTEGRITY
User	`id, name, email, password_hash, role (CREATOR, REVIEWER, ADMIN), department, organization, firebase_uid`	Multi-portal identity; restricts sole admin privileges strictly to aman@synapse.ai.
BrandGuideline	`id, rule_code, category, rule_title, rule_description, severity, forbidden_patterns, citation_ref`	Version-controlled brand rulebook; feeds regex and NLP calibration engines.
ApprovedFact	`id, topic, claim_statement, approved_source_link, evidence_excerpt, expiration_date, is_active`	SQL Truth Bank cross-referenced for FTC Section 5 claim validation.
Submission	`id, title, content_type, raw_content, original_content, file_path, creator_id, reviewer_id, status, scores`	Core lifecycle entity tracking status from Draft through Approved.
EvaluationFlag	`id, submission_id, guideline_id, flag_type, flagged_snippet, explanation, suggested_fix, status, reason`	Actionable diagnostic items driving 1-click remediation and justifications.
ReviewLog	`id, submission_id, actor_id, action, comment, timestamp`	Immutable audit trail logging every human and system transaction.

HTTP METHOD / ROUTE	REQUEST / PAYLOAD	RESPONSE / ROLE ACCESS
`POST /scanner/api/quick-scan`	`{content: string, type: 'text'}`	Returns health score, tone breakdown, flags, and suggested fixes.
`POST /auth/api/firebase-sync`	`{idToken, email, name, role}`	Verifies Firebase JWT; establishes authenticated Flask session.
`POST /reviews/api/take-action`	`{sub_id, action: 'APPROVE', notes}`	Executes stage-gate transition; generates SHA-256 PDF certificate.
`GET /reviews/certificate/<id>`	`None (Session Authenticated)`	Streams compiled cryptographic PDF certificate (application/pdf).

6.2 Comprehensive Automated Test Suite (22/22 Passing - 100%): Verified by 22 automated integration tests across two suites: test_complete_suite.py (12 tests covering engines, route guards, sole admin lock, lifecycle, and rule CRUD) and test_portals_auth.py (10 tests covering dynamic navbars, Firebase sync, and RBAC cross-portal blocks).

CHAPTER 7

7. Cloud Deployment, Verification & Final Summary

RENDER CLOUD DEPLOYMENT & GUNICORN CONFIGURATION

- **Cloud PaaS:** Deployed on Render under project prj-dbgu43t9el5s73dhpa60.
- **Production WSGI Server:** Configured via gunicorn.conf.py, render.yaml, and Procfile, binding dynamically to 0.0.0.0:$PORT.
- **Health Check:** Lightweight /healthz route returning HTTP 200 OK for cloud load balancers.
- **Version Control:** Continuous deployment connected to GitHub repository **CodingWithAman1/BrandGovernanceAI** on branch **main**.

EVALUATION CRITERION	ENGINEERING DELIVERABLE	VERIFICATION STATUS
Multi-Modal Governance	Tone polarity regex, FTC truth bank cross-checking, and OpenCV WCAG 2.1 AA contrast scoring.	**100% COMPLETE**
Isolated Portals & RBAC	3 isolated portals (Client, Reviewer, Admin), Flask-Login route guards, and Sole Admin Lock.	**100% COMPLETE**
Stage-Gate HITL Pipeline	Reviewer Desk, side-by-side diffs, exception justifications, and SHA-256 PDF certificates.	**100% COMPLETE**
Obsidian Cyber UI & FX	Dual cyber cursor (lerp physics), ambient particle canvas, and Laser Scanner HUD modal.	**100% COMPLETE**
Automated Test Matrix	22 comprehensive integration tests spanning all engines, security rules, and workflows.	**22/22 PASSING (100%)**

SUBMISSION CREDITS • TEAM SYNAPSE

Inkloom AI Hackathon • Round 1: Master Architecture Plan

Aman Sharma — Team Leader & Full-Stack / Backend Lead (aman@synapse.ai)
Janhavi Kanojia — Frontend & UI/UX Developer (janhavi@synapse.ai)

BrandGuard AI transitions enterprise brand governance from a slow, bureaucratic roadblock into an intelligent, real-time advisory co-pilot. By unifying linguistic polarity checks, FTC claim verification, accessibility inspections, and cryptographic certification into three dedicated role portals, BrandGuard AI ensures that every piece of published content is verifiable, compliant, and on-brand.
