INKLOOM AI HACKATHON • ROUND 1 MASTER ARCHITECTURE PLAN

BrandGuard AI

Pre-Publication Multi-Modal Brand Governance & Compliance Platform

CORE VALUE PROPOSITION

An advisory pre-publication stage-gate co-pilot that screens text copy, claims, and graphic banners against brand guidelines and FTC Section 5 rules, offering 1-click tone-preserving rewrites and cryptographic PDF audit certificates.

TEAM SYNAPSE LEADERSHIP

Aman Sharma — Team Leader & Full-Stack / Backend Architect

Janhavi Kanojia — Frontend & UI/UX Experience Lead

Built with Python 3.11 • Flask • Werkzeug • SQLite/Postgres • ReportLab • OpenCV

LIVE REPOSITORY: **https://github.com/CodingWithAman1/BrandGovernanceAI.git** • RENDER CLOUD PROJECT: **prj-dbgu43t9el5s73dhpa60** • LOCAL: **http://localhost:5000**

THE MARKET CHALLENGE & LEGAL IMPERATIVES

The Content Governance Crisis: Empirical Evidence & Regulatory Crackdown

85%

Have Brand Guidelines

Organizations establish formal brand guidelines and style guides.

3.2 Days

Average Review Latency

Legal and brand teams take over 72 hours per campaign asset approval.

30%

Consistent Enforcement

Only 30% enforce guidelines consistently across all content channels.

+33%

Revenue Uplift

Consistent brand presentation across platforms yields up to 33% higher revenue.

FTC Act Section 5 & Operation AI Comply

Regulatory enforcement against unsubstantiated marketing claims, misleading AI capabilities, and unverified '#1' claims. Companies face massive financial penalties and consent decrees for false marketing superlatives.

SEC 'AI-Washing' Enforcement

The SEC actively prosecutes organizations falsely overstating AI capabilities, autonomous reliability, and guaranteed ROI to prospective enterprise customers and public investors.

WCAG 2.1 AA & Accessibility Standards

Legal requirements mandate minimum 4.5:1 luminance contrast ratios for standard text and 3:1 for graphical elements. Non-compliant marketing assets face civil accessibility litigation under ADA Title III.

ROLE-BASED WORKSPACE ARCHITECTURE

Three Dedicated Portals with Strict Privilege Separation & Firebase Auth

CLIENT / CREATOR PORTAL

Marketing & Agency Workspace

URL: /client/dashboard
Primary Users: Content Creators, Copywriters, Agencies
Core Capabilities:
• Pre-Publication Studio with live character counter
• 3 instant test presets (Risky, Jargon, Compliant)
• Real-time diagnostic scorecards with radial gauges
• 1-Click tone-preserving rewrite acceptance
• Side-by-side live diff preview and clean text export
• Stage-gate routing and personal certificate archive

REVIEWER & LEGAL DESK

Governance & Stage-Gate Desk

URL: /reviewer/dashboard
Primary Users: Brand Managers, Legal Counsel
Core Capabilities:
• Centralized Stage-Gate queue of pending releases
• Deep diagnostic inspection with legal citation links
• Side-by-side red/green diff review engine
• Creator justification and override inspection
• Threaded review comments and feedback logs
• 1-Click Approve, Request Changes, or Reject
• Automated PDF Certificate generation on approval

EXECUTIVE ADMIN CONTROL

Aman Sharma (Sole Administrator)

URL: /admin/dashboard
Authorized User: aman@synapse.ai (Strictly enforced)
Core Capabilities:
• System-wide telemetry & cross-department metrics
• Dynamic Brand Rulebook CRUD editor (tone, claims, visual)
• SQL Truth Bank manager with citation links
• User management: promote/demote Reviewers & Clients
• Tamper-evident immutable audit log viewer
• Comprehensive Guideline Clarity & Friction Index

FIREBASE AUTHENTICATION ARCHITECTURE (PROJECT: brandbuildai-2749e)
Seamless 1-Click Google Sign-In powered by the Firebase Web SDK. Authenticated tokens are synchronized via **/auth/api/firebase-sync** to provision user accounts and establish secure, role-restricted Flask-Login sessions with automated RBAC redirects.

DETERMINISTIC COMPLIANCE ARCHITECTURE

The Four Multi-Modal Governance Engines: Zero-Hallucination Design

ENGINE 1: TONE CALIBRATOR

Voice Polarity & Robotic Jargon Filter

- Evaluates draft text against 5 enterprise tone polarities.
- Regex detection of robotic AI filler (*'delve into'*, *'rich tapestry'*, *'a testament to'*, *'game-changer'*).
- Filters aggressive/condescending phrasing (*'crush competition'*, *'obviously'*).
- Docks score proportionally (Critical: -15, Warning: -10, Suggestion: -5).
- Generates tone-preserving 1-click suggested rewrites.

ENGINE 2: TRUTH BANK CHECKER

FTC Section 5 Claims & Evidence Guardrails

- Cross-references claims against the SQL **ApprovedFact** repository.
- Flags unverified absolute claims (*'#1 in the world'*, *'world's fastest'*).
- Catches illegal guarantees (*'100% risk-free'*, *'foolproof'*, *'never fails'*).
- Docks score by -20 per FTC regulatory violation.
- Requires verifiable empirical citations or independent market study links.

ENGINE 3: VISUAL INSPECTOR

OpenCV K-Means & WCAG 2.1 Contrast

- OpenCV/PIL image processing with K-Means color quantization.
- Validates uploaded banners against approved corporate design tokens.
- Calculates WCAG 2.1 AA relative luminance contrast ratios:
Ratio = (L1 + 0.05) / (L2 + 0.05), enforcing minimum 4.5:1 text threshold.
- Optical Character Recognition (OCR) scans text embedded in banners.

ENGINE 4: CLARITY ENGINE

Guideline Friction Index & Feedback Loop

- Tracks creator dispute rates, overrides, and 1-click acceptance ratios.
- Generates the **Guideline Clarity Index** and Friction Heatmap.
- Computes rule friction: **Friction = Disputed Overrides / Total Flags**.
- Identifies ambiguous corporate rules causing repetitive creator mistakes.
- Empowers leadership to fix outdated guidelines instead of blaming staff.

HUMAN-IN-THE-LOOP (HITL) GOVERNANCE LIFECYCLE

The Five-Step Pre-Publication Stage-Gate & PDF Certification

STEP 1

Pre-Publish Studio

Creator inputs campaign copy or graphic asset. Studio triggers Laser Scanner HUD modal before submission.

STEP 2

Diagnostic Scorecard

Multi-engine evaluation runs in <150ms. Renders Health Score radial gauge and granular finding cards.

STEP 3

1-Click Remediation

Creator accepts 1-click rewrites. Live diff updates with green pulse; compliance score recalculates dynamically.

STEP 4

Stage-Gate Queue

Clean draft routes to Reviewer Desk. Manager and Legal Counsel inspect diffs, citations, and comment threads.

STEP 5

PDF Certification

Formal approval triggers SHA-256 content hashing and generates an immutable PDF Compliance Certificate.

ANATOMY OF THE CRYPTOGRAPHIC PDF COMPLIANCE CERTIFICATE

- **SHA-256 Digital Fingerprint:** Cryptographically seals the exact approved text so any post-approval tampering invalidates the certificate.
- **Complete Audit Trail:** Logs Submission ID, Approver ID, Formal Approver Name, Department, and UTC Timestamp.
- **Health Score Card:** Embeds final Overall Compliance, Tone Balance, Truth Verification, and Visual Contrast scores.
- **Enterprise Due Diligence:** Serves as an immutable legal defense artifact for regulatory compliance audits (FTC, SEC, and EU AI Act).
- **Automated Generation:** Assembled on the fly via ReportLab using vector graphics, formal regulatory headings, and security seals.
- **Instant Client Access:** Downloadable directly from the Client Portal and Reviewer Desk.

UI/UX DESIGN SYSTEM & LIVE MICRO-INTERACTIONS

Extraordinary Obsidian Cyberpunk Interface with Dual Cursor & Laser HUD

Interactive Dual Cyber Cursor

• Inner luminous pointer dot (**#cursor-dot**) with instantaneous tracking.
• Outer magnetic trailing glow ring (**#cursor-ring**) using 60 FPS Linear Interpolation (lerp) trailing physics.
• Dynamic role-based color shifting (Cyan for Client, Amber for Reviewer, Crimson for Admin).
• Magnetic hover scale on buttons, chips, and inputs with click shockwave ripple animation.

Moving Background Aurora & Particles

• Four ambient radial aurora orbs (Indigo, Cyan, Violet, Rose) drifting along smooth Lissajous curves.
• HTML5 Canvas constellation particle engine generating 40+ drifting luminous nodes that connect with faint vector lines.
• Cyber command grid overlay with radial vignette mask.
• Auto-pauses on background tabs for zero battery drain.

Multi-Engine Laser Scanner HUD

• Holographic modal overlay triggered upon clicking 'Run Pre-Publication Audit'.
• Oscillating neon laser scanline traversing down the document.
• Real-time digital progress gauge counting from 0% to 100%.
• Live terminal status ticks verifying NLP features, Truth Bank claims, OpenCV contrast, and rewrite calibration.

Side-by-Side Diff Engine & 1-Click Fixes

• Live comparison between unvetted initial draft and active remediated copy.
• 1-Click Accept Fix flashes updated text with emerald dark-mode glow.
• Instant 'Copy Snippet' button for each individual recommendation.
• 'Copy Clean Copy' and 'Export (.txt)' buttons for zero-friction copywriter workflow.
• Glassmorphism toast notifications confirming all actions.

TECHNICAL SPECIFICATIONS & SCHEMA

Relational SQL Data Model, Flask Modular Architecture & RESTful API

DATABASE MODEL	CORE ATTRIBUTES & RELATIONS	GOVERNANCE RESPONSIBILITY
User	id, name, email, role (CREATOR, REVIEWER, ADMIN), department, organization, firebase_uid, is_active	Role-Based Access Control; strictly locks sole admin privilege to aman@synapse.ai.
BrandGuideline	id, rule_code, category (TONE, CLAIM, VISUAL), rule_title, severity, forbidden_patterns, citation_ref	The corporate brand rulebook; drives deterministic regex and NLP evaluation.
ApprovedFact	id, topic, claim_statement, approved_source_link, evidence_excerpt, expiration_date, is_active	The immutable SQL Truth Bank; grounds verified enterprise claims under FTC Section 5.
Submission	id, title, content_type, raw_content, original_content, creator_id, reviewer_id, status, compliance_scores	The lifecycle tracking model spanning Draft, Scanned, Pending, Changes Requested, and Approved.
EvaluationFlag	id, submission_id, guideline_id, flag_type, flagged_snippet, explanation, suggested_fix, status, override_reason	Granular violation items enabling 1-click remediation or formal creator justifications.
ReviewLog	id, submission_id, actor_id, action (SCAN, FIX_ACCEPTED, SUBMIT, APPROVED), comment, timestamp	Immutable tamper-evident audit ledger capturing all human and system actions.

PROGRAMMATIC REST API ENDPOINTS

- **POST /api/v1/scan** — Payload: *{"text": "..."}* → Returns: overall score, tone score, claim score, and flag list.
- **GET /api/v1/guidelines** — Returns: active corporate rules, categories, severities, and source citations.
- **POST /auth/api/firebase-sync** — Payload: *{idToken, uid, email, portal}* → Syncs Firebase token and returns session cookie.

TESTING, DEPLOYMENT & ROADMAP

Comprehensive Verification, Cloud Deployment & Next Milestones

22/22 Automated Tests (100% Pass)

• **test_complete_suite.py (12 Tests):** Tone Calibrator, Claims Checker, Visual Inspector, Clarity Engine, PDF Generator, Route Protection, Sole Admin Lock, Portal Isolation, and Full Lifecycle.
• **test_portals_auth.py (10 Tests):** Firebase sync, dynamic navbars, role redirects, and RBAC enforcement.
• All tests passing in <6 seconds with 100% assertions satisfied.

Production Cloud Deployment (Render)

• **Render Cloud PaaS:** Connected directly to GitHub repository with automatic CI/CD on git push to **main**.
• **Gunicorn WSGI:** Configured via **gunicorn.conf.py** and **Procfile** binding dynamically to **0.0.0.0:$PORT**.
• **Zero-Downtime Healthcheck:** Dedicated **/healthz** route for Render load balancers.
• **Live Repo:** github.com/CodingWithAman1/BrandGovernanceAI

SUBMISSION FOR INKLOOM AI HACKATHON • ROUND 1 MASTER PLAN

Team Synapse: Aman Sharma & Janhavi Kanojia

BrandGuard AI transitions enterprise brand governance from a reactive, bureaucratic bottleneck into an intelligent, real-time advisory co-pilot. By unifying linguistic polarity checks, FTC claim verification, accessibility inspections, and cryptographic certification into three dedicated role portals, BrandGuard AI ensures that every piece of published content is verifiable, compliant, and on-brand.
